## PROTRAN® PR3200 Differential Pressure Transmitter

- Silicon-on-Sapphire sensor technology
- Pressure ranges up to 200bar DP
- 4-20ma two wire output
- Accuracy 0.30% nlhr
- Intrinsically safe option
- Wet/wet operation
- Uni and Bi-directional operation
- Accurate at very wide DP range

The advanced sensor design consists of a piezoresistive silicon strain gauge circuit, which is epitaxially grown onto the surface of a sapphire diaphragm to form a single crystalline structure. The sapphire sensor element is then molecularly bonded to a titanium alloy sub-diaphragm.

This enables the sensor to endure higher over-pressures and provides superb corrosion resistance. The sensor exhibits virtually no hysteresis and excellent long-term stability over wide temperature ranges.

## Specifications

The PROTRAN PR3200 differential pressure transmitter uses two Silicon-on-Sapphire pressure diaphragms, offering high stability and performance with true wet/wet operation, suitable for use with all liquids and gases compatible with stainless steel and alumina. Flush diaphragm models are available with integral or remote pressure diaphragms for hygienic applications.

ATEX and IECEx approval and protection by intrinsic safety is optional and intended for installation and operation in zone 0, gas group IIC, temperature class T4 and zone 20 dust.

### Typical Applications include:

- Flow measurement with pivot tubes, orifice plates and mass flow meters
- Static differential pressure measurement
- Control in combustion chambers and clean rooms
- Condition monitoring
- Filter monitoring in high pressure hydraulic systems
- Any application on liquid or gas requiring reliable differential pressure measurement
